Algorithm: AreaGreaterThanItaly

Input: Two integers *length* and *width*

Output: A boolean revealing whether or not the input's area is greater than that of the Italian Republic

1 Procedure AreaGreaterThanItaly(*length*, *width*)

2   area ← *length* · *width*

3   if *area* > 301340 then

4   return true

5   else

6   return false
